SUBJECT INDEX

Algebra to processing "battlefield obscuration" stereo-pair video data, application of an n-dimensional, 57
Algorithm for hardware implementation, two-pass warp, 160
Animation of three-dimensional time-varying meteorological fields, computer, 106
Application of holographic stereograms to three-dimensional data display, 84
Application of an n-dimensional algebra to processing "battlefield obscuration" stereo-pair video data, 57

Bandwidth reduction for spatial image data associated with three-dimensional television systems with parallax, transmission and storage, 68
"Battlefield obscuration" stereo-pair video data, application of an n-dimensional algebra to processing, 57
Biopolymers, construction, display, and manipulation of three-dimensional models of, 93

CT medical data, multiple exposure holographic display of, 149
Clinical verifocal mirror display system at the University of Utah, 145
Coherent optics, processing of multidimensional signals by, 77
Complex physical model, interactive three-dimensional display and interpretation of a, 100
Computer animation of three-dimensional time-varying meteorological fields, 106
Computer data, true three-dimensional display of, 141
Computer space, interactive three-dimensional, 155
Computer techniques for the representation of three-dimensional data on a two-dimensional display, 3
Construction, display, and manipulation of three-dimensional models of biopolymers, 93
Cylindrical holographic stereograms, digital perspective correction for, 130

SUBJECT INDEX

Algebra to processing "battlefield obscuration" stereo-pair video data, application of an n-dimensional, 57
Algorithm for hardware implementation, two-pass warp, 160
Animation of three-dimensional time-varying meteorological fields, computer, 106
Application of holographic stereograms to three-dimensional data display, 84
Application of an n-dimensional algebra to processing "battlefield obscuration" stereo-pair video data, 57

Bandwidth reduction for spatial image data associated with three-dimensional television systems with parallax, transmission and storage, 68
"Battlefield obscuration" stereo-pair video data, application of an n-dimensional algebra to processing, 57
Biopolymers, construction, display, and manipulation of three-dimensional models of, 93

CT medical data, multiple exposure holographic display of, 149
Clinical verifocal mirror display system at the University of Utah, 145
Coherent optics, processing of multidimensional signals by, 77
Complex physical model, interactive three-dimensional display and interpretation of a, 100
Computer animation of three-dimensional time-varying meteorological fields, 106
Computer data, true three-dimensional display of, 141
Computer space, interactive three-dimensional, 155
Computer techniques for the representation of three-dimensional data on a two-dimensional display, 3
Construction, display, and manipulation of three-dimensional models of biopolymers, 93
Cylindrical holographic stereograms, digital perspective correction for, 130

Data display, application of holographic stereograms to three-dimensional, 84
Design of and image editing with a space-filling three-dimensional display based on a standard raster graphics system, 117
Digital holographic display of medical CT images, 109
Digital perspective correction for cylindrical holographic stereograms, 130
Display based on a standard raster graphics system, design of and image editing with a space-filling three-dimensional, 117
Display of computer data, true three-dimensional, 141
Display, computer techniques for the representation of three-dimensional data on a two-dimensional, 3
Display and interpretation of a complex physical model, interactive three-dimensional, 100
Display, and manipulation of three-dimensional models of biopolymers, construction, 93
Display of medical CT images, digital holographic, 109
Display, real-time depth measurement in a stereoscopic television, 34
Display system at the University of Utah, clinical verifocal mirror, 145
Display, viewpoint dependent imaging: an interactive stereoscopic, 41
Displays, stereoscopic, 20

Editing with a space-filling three-dimensional display based on a standard raster graphics system, design of and image, 117
Exposure holographic display of CT medical data, multiple, 149

Features, target identification using three-dimensional, 46

Graphics system, design of and image editing with a space-filling three-dimensional display based on a standard raster, 117

Hardware implementation, two-pass warp algorithm for, 160
High bandwidth volumetric display system (Cancelled), 165
Holographic display of CT medical data, multiple exposure, 149
Holographic display of medical CT images, digital, 109
Holographic stereograms, digital perspective correction for cylindrical, 130
Holographic stereograms, survey of, 15
Holographic stereograms to three-dimensional data display, application of, 84

Identification using three-dimensional features, target, 46
Image data associated with three-dimensional television systems with parallax, transmission and storage bandwidth reduction for spatial, 68
Image editing with a space-filling three-dimensional display based on a standard raster graphics system, design of and, 117
Images, digital holographic display of medical CT images, 109
Imaging: an interactive stereoscopic display, viewpoint dependent, 41
Implementation, two-pass warp algorithm for hardware, 160
Interactive stereoscopic display, viewpoint dependent imaging: an, 41
Interactive three-dimensional computer space, 155
Interactive three-dimensional display and interpretation of a complex physical model, 100
Interpretation of a complex physical model, interactive three-dimensional display and, 100

Manipulation of three-dimensional models of biopolymers, construction, display, and, 93
Medical CT images, digital holographic display of, 109
Medical data, multiple exposure holographic display of CT, 149
Meteorological fields, computer animation of three-dimensional time-varying, 106
Mirror display system at the University of Utah, clinical verifocal, 145
Model, interactive three-dimensional display and interpretation of a complex physical, 100
Models of biopolymers, construction, display, and manipulation of three-dimensional, 93
Multidimensional signals by coherent optics, processing of, 77
Multiple exposure holographic display of CT medical data, 149

N-dimensional algebra to processing "battlefield obscuration" stereo-pair video data, application of an, 57

Ocean acoustic tomography (Cancelled), 165
Optics, processing of multidimensional signals by coherent, 77

Parallax, transmission and storage bandwidth reduction for spatial image data associated with three-dimensional television systems with, 68
Perspective correction for cylindrical holographic stereograms, digital, 130
Processing of multidimensional signals by coherent optics, 77

Raster graphics system, design of and image editing with a space-filling three-dimensional display based on a standard, 117
Real-time depth measurement in a stereoscopic television display, 34
Reduction for spatial image data associated with three-dimensional television systems with parallax, transmission and storage bandwidth, 68

Signals by coherent optics, processing of multidimensional, 77
Space, interactive three-dimensional computer, 155
Spatial image data associated with three-dimensional television systems with parallax, transmission and storage bandwidth reduction for, 68
Stereograms, digital perspective correction for cylindrical holographic, 130
Stereograms, survey of holographic, 15
Stereograms to three-dimensional data display, application of holographic, 84
Stereo-pair video data, application of an n-dimensional algebra to processing "battlefield obscuration", 57
Stereoscopic display, viewpoint dependent imaging: an interactive, 41
Stereoscopic displays, 20
Stereoscopic television display, real-time depth measurement in a, 34
Storage bandwidth reduction for spatial image data associated with three-dimensional television systems with parallax, transmission and, 68
Survey of holographic stereograms, 15

Target identification using three-dimensional features, 46
Television display, real-time depth measurement in a stereoscopic, 34
Television systems with parallax, transmission and storage bandwidth reduction for spatial image data associated with three-dimensional, 68
Texton theory of two-dimensional and three-dimensional vision, 2
Three-dimensional computer space, interactive, 155
Three-dimensional data display, application of holographic stereograms to, 84
Three-dimensional data on a two-dimensional display, computer techniques for the representation of, 3
Three-dimensional display based on a standard raster graphics system, design of and image editing with a space-filling, 117
Three-dimensional display of computer data, true, 141
Three-dimensional display and interpretation of a complex physical model, interactive, 100
Three-dimensional features, target identification using, 46
Three-dimensional models of biopolymers, construction, display, and manipulation of, 93
Three-dimensional television systems with parallax, transmission and storage bandwidth reduction for spatial image data associated with, 68
Three-dimensional time-varying meteorological fields, computer animation of, 106
Three-dimensional vision, texton theory of two-dimensional and, 2
Time-varying meteorological fields, computer animation of three-dimensional, 106
Transmission and storage bandwidth reduction for spatial image data associated with three-dimensional television systems with parallax, 68

True three-dimensional display of computer data, 141
Two-dimensional display, computer techniques for the representation of three-dimensional data on a, 3
Two-dimensional and three-dimensional vision, texton theory of, 2
Two-pass warp algorithm for hardware implementation, 160

University of Utah, clinical verifocal mirror display system at the, 145

Verifocal mirror display system at the University of Utah, clinical, 145
Video data, application of an n-dimensional algebra to processing "battlefield obscuration" stereo-pair, 57
Viewpoint dependent imaging: an interactive stereoscopic display, 41
Vision, texton theory of two-dimensional and three-dimensional vision, 2

Warp algorithm for hardware implementation, two-pass, 160
